**iris<sup>TM</sup>**

Truly your elevator partner

# IRIS<sup>TM</sup>

IRIS is the rainbow goddess in Greek mythology

IRIS represents **High Quality, Excellent Aesthetic Design,**  
**Short Delivery** and **Best Service**

# Revolutionary PM Gearless Elevator

## Development Concept

Groundbreaking low & mid speed elevators substitute the Geared Machine with highly efficient Gearless Machine that adopts Permanent Magnet Synchronous Motor(PMSM) and exclusive PMSM controller

## Coverage

- Speed : 1.0 ~ 2.5m/s
- Duty : Up to 1,600kg
- Stops : Up to 32stops (1.0 ~ 1.75m/s)  
Up to 40stops (2.0 ~ 2.5m/s)

## Main Features

- Green Elevator
  - Energy Savings
  - Environment Protections
  - Space Savings
- Ride Comfort
- Safety and Reliability

# Green Elevator : IRIS

Sigma's goal of green product includes compliance with stringent environmental standards.

Accordingly, our approach to an environmentally acceptable product design requires careful consideration of the entire product life cycle from design to production, and has better solutions for people.

## Energy Savings

IRIS pursues cost savings of building power supply by reducing the capacity of electrical facility required for the operation of the elevator.

### High Motor Efficiency

By using permanent magnet (PM) gearless motor, IRIS improves motor efficiency.

### Lower Power Consumption

Compact motor design enables IRIS to lower initial electricity load and power consumption. It also allows IRIS to reduce heat from the motor.

## Environment Protections

### **No need for lubricant oil**

By using PM Gearless, IRIS is free from lubricate oil for the gear box. This enables us not only to reduce maintenance cost but also to keep machineroom cleaned.

### **EMC filters**

IRIS uses EMC filters which meet CISPR public 22 class. It minimizes interference from electrical and electronic equipment like home appliances in the building.

## Space Savings

### **Compact machine**

Customers may benefit 1/3 space from a smaller size.

### **Flexible space design and utilization**

IRIS enables architects to design building structure flexibly and use building space efficiently.

## Ride Comfort

### **Gearless system**

The absence of gearbox allows to eliminate noise from gear friction. Its coaxial transmission also reduces vibration and noise effectively.

### **Controller design for lower noise**

Low noise is possible by applying high frequency of 8kHz for synchronous motor controller.

### **Smooth Operation**

IRIS adopts VVVF(Variable Voltage Variable Frequency)control with 5th generation IPM and IGBT, and is designed for low vibration.

# PM Gearless Elevator : IRIS

SIGMA's cutting-edge gearless technology is favored to suit contemporary buildings.

IRIS enables the value of the building to increase with its new concepts.

## Safety and Reliability

### Flexible CPU

Totally digitally design applying 32bit DSP(Digital Signal Processor) or PM motor speed control.

### Easy Maintenance

Operation history log, mal-function analyzing system applied.

### Guaranteed Reliability

HALT(Highly Accelerated Life Test) on parts to decrease defects and increase life span of parts.

### Full power reserve of motor

A sufficient power reserve will ensure safer and more reliable operation of the elevator.

**EMI Test**  
(Electro Magnetic Interference)

**Vibration and Dropping Test**

**ESD Test**  
(Electro Static Discharge)

**Burst Test**

# Technical Features

## Operation Functions

● Standard ○ Option

FEATURES	DESCRIPTION	
<b>Attendant Operation</b>	The operating mode of an elevator can be changed from the normal automatic operation to the attendant service by an attendant switch.	●
<b>Independent Operation</b>	Key switch in the car operating panel will cancel any existing car calls and hold the door open at the landing position. During independent operation, the car will respond only to car calls.	●
<b>Back-up operation</b>	When Electrical transmission device between hall call and control panel comes into the abnormal condition and it lasts during some period, elevator control device is converted to Back-up operation automatically. Then, the elevator moves in sequence up and down repeatedly from top to bottom floor to service every other floor which is in normal condition.	●
<b>Safe Drive Operation</b>	When a car stops between floors due to mechanical malfunction, it will descend to the nearest floor at a low speed and hold the doors open after checking all safety measures.	●
<b>Car Call Cancellation</b>	Allows cancellation of an incorrectly registered car call. If you push a wrong floor button in the car, you can cancel it by pressing that floor button one more time.	●
<b>Automatic Turn-Off of Car Light &amp; Fan</b>	Car illumination and fan are turned off automatically in case there is no hall call or car call, this saves energy.	●
<b>Automatic Bypass</b>	A fully-loaded car ( More than 80% of rated load) bypasses hall calls in order to maintain maximum operational efficiency.	●
<b>Overload Holding Stop (110% of rated load)</b>	When the number of passengers exceeds the normal capacity, a buzzer sounds and the elevator remains stopped at that floor. When the excessive number of passengers disembark, the buzzer stops, the elevator doors close, and operation continues.	●
<b>Detection of Jammed Hall Button</b>	If a hall button is jammed mechanically, the hall call will be automatically bypassed after being served once, until the program is resolved.	●
<b>Car Door Safety Edge</b>	Extending the full height of the car door, this device causes the doors to return to the fully open position, should the door encounter a person or obstacle while closing.	●
<b>Micro Levelling</b>	An automatic two way levelling device is provided to maintain the elevator car level with the landing, regardless of elevator load or direction of travel.	●
<b>N-Plex Operation</b>	It can control up to 4 sets of elevators to optimize allocation of hall calls.	○
<b>Non-Stop Operation</b>	Specific floors which are memorized in control panel can be set to disable using switch on car operating panel or in security room.	○
<b>Parking Operation</b>	The elevator can be automatically parked at the predetermined floor with its door closed, as well as turn off the lights and ventilation.	○
<b>VIP Operation</b>	The specified elevator is controlled by the special call buttons provided only for VIP elevator	○
<b>Emergency Power Operation</b>	If normal building power supply fails and the building provides emergency power to the controller(s), one elevator at a time will proceed to the lowest landing where it will stop with doors open and with all of its power and operating circuit in an inoperative standby condition.	○
<b>Fire return operation</b>	In case of fire, every car should be returned to the specified floor in order to evacuate passengers to safety.	○
<b>Firemen Operation</b>	In case of fire, a firemen can use the elevator which is stopped at the specified floor in order to support firemen for fire-fighting.	○
<b>Anti-nuisance Operation</b>	In case of substantial difference between the number of calls registered on the car operating panel and actual load in the elevator, the elevator prevents unnecessary operation by cancelling all registered calls when it arrives at the nearest floor.	○
<b>Door Nudging</b>	When the doors remain open for more than the fixed door open time, this feature closes the doors at reduced closing speed with the buzzer sounding.	○
<b>Voice Synthesizer</b>	This system provides riding passengers with audio information about car operation such as direction of travel, landing floor, etc.	○
<b>Door Photo Sensor</b>	The doors reverse to fully open position if the light ray unit detects an obstacle when the doors are closing.	○

# Technical Data

## Work by Others

The works below are not included in the elevator installation work and should be carried out by building contractors in accordance with our drawings, relevant international or local codes and regulations.

### Hoistway

- A properly framed and enclosed hoistway, including any venting as required by the governing code or authority.
- A dry pit constructed to the elevator manufacturer's specifications to reinforce or sustain any vertical forces on the guide rails and impacted loads from the car and counterweight buffers.
- A metal sill angle or concrete haunch across the full width of the hoistway at each elevator landing.
- Provision of steel bars to fix jamb around the entrance of each floor.
- All cutting, including cutouts to accommodate hall signal fixtures, patching, painting of walls, floors, or partitions, together with finish painting of entrance doors and frames, if required.
- Provision of entrance or ladder for pit access
- Supply and installation of fascia plate.
- Installation of emergency exits and electric wiring in blind sections of hoistway where required.
- The tolerance of perpendicular line over the whole hoistway height must not exceed  $\pm 30\text{mm}$ .
- A waterproof outlet and light fixture in the elevator pit area with the light switch being located adjacent to the access door or ladder.
- Suitable light fixture and convenience outlet in the pit with a light switch adjacent to the access door or ladder. The receptacles shall have protection for ground fault circuit interrupter.

### Machine Room

- Provision of wiring between controller and building management system.
- A construction hoisting beam or hook, if required, with the correct location and size as determined by the elevator contractor for each hoistway.
- Noise insulation should be installed between machine room and adjacent residential area.
- A suitable machine room with legal access, ventilation and concrete floor.  
The temperature in the machine room should be maintained between  $5^{\circ}\text{C}$  and  $40^{\circ}\text{C}$ .  
Relative humidity should not exceed 90%(monthly) and 95%(daily) non-condensing.  
Ventilation fan or Air conditioner should be provided as per heat dissipation by the elevator contractor.
- The size of entrance shall be Min, 1000mm(W) x 2000mm(H).
- Installation of lead-in wire and earth wire between building main power board and machine room incoming distribution board. However, machine room lighting source supply shall be installed separately.
- Provision of suitable light fixture and convenience outlets in the machine room

### Miscellaneous
